The NUITF provides a forum for utilities and the IBEW to collaborate and achieve common goals by establishing a strategic approach to the short-term and long-term needs of the utility industry. To accomplish these goals, the NUITF has partnered with the NJATC, the industry’s premier training program, to make their apprenticeship materials available to all utilities in the United States and Canada where employees are represented by the IBEW. Contact us to provide your employees with the best education in the trade.
The National Utility Industry Training Fund (NUITF) knows that quality training is critical to the success of the utility industry. Continual training is necessary to keep workers up to date on changing technical and environmental requirements. Skilled workers will be needed to replace those retiring, to repair and maintain existing utility systems, and to build new infrastructure to support the ever-increasing demand for power.

To fulfill industry needs, the International Brotherhood of Electrical Workers (IBEW) and sponsoring utilities created regional training centers operating under the NUITF (a Taft-Hartley training trust fund). There are currently four training centers in partnership with these leading utilities:

- Alabama Power Company (Calera, AL)
- DTE Energy (Westland, MI)
- Kansas City Power and Light (Kansas City, MO)
- Tucson Electric Power Company (Tucson, AZ)

Our apprenticeship program equips students with excellent job skills by providing hands-on experience as well as the fundamentals of electrical, mechanical, and construction theory. Our instructors and materials are second to none, and each training center offers classroom facilities and a fully stocked training yard that provides students with a real work environment.

The NUITF is a partnership between the IBEW and a group of forward-thinking utility companies whose mission is to provide current and prospective employees with the best training available.

An Industry Leader

The NUITF training centers offer the latest technology to enhance learning and maximize field preparation. We currently offer the following courses as well as customized training programs:

- Pre-Employment Boot Camp and Climbing Qualification
- Advanced AC
- NJATC Apprentice Training
- Boom Truck Operator Certification
- Competent Person Excavation
- Fundamentals of DC and AC
- Fundamentals of Electrical Utility Systems
- General Electrical Safety
- Hot Stick Fundamentals and Refresher Courses
- OSHA 10-HR and 30-HR Classes
- Personal Protective Grounding
- Supervisor and Foremen Leadership Training
- Transformer Connections 1 & 2
